

***ILR Review* Special Series: Call for Papers in Industry and Organization Studies**

The *ILR Review* features a special series on Industry and Organization Studies in partnership with the Industry Studies Association (ISA). The goal of this article series is to promote rigorous scholarship that examines the complex, real-world problems faced by industries and organizations. The *Review* has a long record of publishing articles in the industry studies tradition—based on interdisciplinary, field-based research. It is the *premier* outlet for industry studies that address the world of work and employment. This series seeks to foster the development of the next generation of scholars who will advance theory, policy, and practice in this field.

Industry Studies articles accepted for publication are published in our regular journal issues and will be posted on the *ILR Review* website in a special virtual series, with links to the ISA and other relevant websites. We also promote the findings of this research through various media outlets.

In keeping with the Industry Studies tradition, papers should be based on the systematic analysis of original data—qualitative or quantitative—gathered from real organizations. Original data may include interviews, field experiments, surveys, archival data, participant observation, or contextual understanding gained through involvement in the industry. The paper's level of analysis can be individual, group, organizational, industry, or cross-industry, and it may focus on one national context or provide international or comparative analyses. It should provide insight into issues of significance at the industry or organizational level of analysis. Research using analytical modeling or statistical analysis of secondary data sets must address research questions that have been motivated by firm- or industry-specific observations made by the authors.

Authors who would like their papers to be considered for publication in this series should submit them through the regular on-line portal and, when prompted, choose the 'special issue' button and type "Industry Studies Special Series."
